PROJECT MAINTENANCE CEPA PIER A - ACAJUTLA EL SALVADOR

To the best of everyone's knowledge, the maintenance project for Pier A Front side has experienced delays in its start.

Port informed this project holds significant importance as the port urgently requires infrastructure maintenance investment for Pier A. The objective is to restore the design conditions of Pier A, focusing on repairing both the Front and south sides. The scope of work includes:

- Rehabilitation of 2,300 square feet of high-resistance concrete surface
- Dismantling and maintenance of 22 metal defenses
- Application of waterproof epoxy paint treatment to the concrete surface

Given the above, the project is scheduled to commence on May 23rd, including the first 100 meters (first stage - pier closure) at the center of the pier, with an anticipated completion date of August 31st.

We will keep posted.
